Billing ERP — Workflow & User Guide

Ye document batata hai poora system kaise bana hai, kaunsi technologies use hui hain, aur ek Admin/User aur ek Cashier — dono roz ka kaam kaise karenge, shuru se lekar end tak.

v1.0 2 modules • 15 business areas Frontend + Backend, do alag projects

01 Overview

Billing ERP ek full business management system hai — Billing/Invoicing, Inventory, Accounting ke saath-saath CRM, HR & Payroll, aur Manufacturing bhi ek hi jagah. Business apne products, customers, suppliers, sales, purchase, staff, aur reports — sab kuch is ek system se sambhal sakta hai, GST ke hisaab se.

Do alag hisse hain: jo aap browser mein dekhte hain (UI) aur jo data save/calculate karta hai (backend + database) — ye technically do alag programs hain jo aapas mein baat karte hain. Neeche donon ki puri detail hai.

02 Kaunsi Language/Technology Use Hui Hai

Har hisse ke liye alag tool chuna gaya hai, jo us kaam ke liye sabse sahi tha.

FRONTEND — JO BROWSER
MEIN DIKHTA HAI

TypeScriptReact 19

Next.js 16

Tailwind CSS

ZustandRecharts

BACKEND —
SERVER KA LOGIC

C#

ASP.NET Core (.NET 10)

Dapper

DATABASE — DATA
KAHAN STORE HOTA HAI

SQL ServerT-SQL

Stored Procedures

Entity Framework Core

SECURITY — LOGIN/PERMISSIONS

JWT

HTTP-only Cookie

bcrypt

Role-Based Access

03 Ye Sab Aapas Mein Kaise Judta Hai

Jab user koi button click karta hai, request is raaste se guzarti hai:

BROWSER

Next.js App

Login page,
Dashboard, Invoice
form — sab UI yahin
hai

→ /api/*

SERVER

.NET Core API

GST calc, stock
ledger, permission
check, sab business
rules

→ Stored Proc

STORAGE

SQL Server

Har invoice, product,
user, transaction
yahin save hota hai

User ke liye ye sab invisible hai — usse sirf ek website dikhti hai. Login karte hi ek secure token (JWT) uske browser mein save ho jata hai, jo har request ke saath jaakar backend ko batata hai "ye wahi logged-in user hai", aur backend check karta hai uske role ko us kaam ki **permission** hai ya nahi.

04 Poora Workflow — Shuru Se

Ek naya business is system par kaam shuru kare to typically is order mein chalta hai:

1

Login

Email aur password daal kar login karta hai. System check karta hai user active hai aur password sahi hai — fir uska role (Admin, Cashier, waghera) yaad rakh lete hai.

/login

2

Dashboard

Aaj ki sales, aaj ki purchase, kitna paisa aana baaki hai (receivable), kitna dena baaki hai (payable), low-stock items — sab ek nazar mein.

/dashboard

3

Master Data Set Karna

Sabse pehle Products, Categories, Units add kiye jaate hain — fir Customers aur Suppliers. Ye ek baar ka setup hai.

Products · Customers · Suppliers

4

Sale Invoice Banana

Customer chuno, product(s) add karo — system khud GST calculate karta hai (customer same state mein hai to CGST+SGST, doosre state mein hai to IGST). Payment method chuno aur save karo.

Invoice number auto: INV-00001, INV-00002...

5

Stock Khud-ba-khud Update

Invoice save hote hi us product ka stock automatically kam ho jata hai — kisi ko manually stock ghatana nahi padta.

6

Purchase Entry

Supplier se maal aaya to Purchase entry banate hain — isse stock badh jata hai (Sale ka ulta).

Purchase number auto: PUR-00001...

7

Payment Aana/Jaana

Customer se baaki paisa aaye to "Receive Payment", supplier ko dena ho to "Pay Supplier" — dono jagah due amount khud update hota hai.

8

Reports Dekhna

Sales, Purchase, GST, Profit, Payment, Expense — 6 tarah ki reports, date-range chun kar, Excel/PDF mein export bhi ho sakti hain.

9

Admin: Users & Settings

Naye staff members add karna, unko role dena (Admin/Cashier/Manager...), business profile (GSTIN, address, invoice prefix) set karna, aur data ka backup lena — ye sab sirf Admin ke paas hota hai.

05 Admin/User vs Cashier — Kaam Kaise Bantata Hai

Har login ek *role* ke saath aata hai, aur us role ke hisaab se system khud decide karta hai ki wo kya dekh sakta hai aur kya kar sakta hai.

● Admin / Full User	Sab kuch	● Cashier	Limited, counter-focused
✓ Sales aur Purchase — dono create/edit/cancel/delete		✓ Dashboard dekh sakta hai	
✓ Products, Customers, Suppliers — pura CRUD		✓ Naya Sale Invoice bana sakta hai aur print kar sakta hai	
✓ Inventory adjustment (stock manually theek karna)		✓ Product list dekh sakta hai (naya add nahi kar sakta)	
✓ CRM, HR & Payroll, Manufacturing		✓ Naya Customer add kar sakta hai	
✓ Saari Reports — dekhna, print, Excel/PDF export		✓ Payment receive kar sakta hai	
✓ Users add/edit, Roles ki permissions badalna		✓ Reports dekh sakta hai (export/print nahi)	
✓ Business Settings, Data Backup/Restore, Excel Import		✗ Purchase, Inventory, CRM, HR, Manufacturing — kuch bhi nahi	
		✗ Kisi bhi cheez ko delete ya cancel nahi kar sakta	
		✗ Users, Roles, ya Settings — bilkul nahi	

Ye sirf UI mein chhupaya nahi gaya hai — agar Cashier kisi tarah seedha us cheez ka link kholne ki koshish bhi kare (jaise Purchase delete karna), backend khud request reject kar deta hai (403 Forbidden) chahe URL kaise bhi hit ho.

06 Permission Matrix (Kuch Zaroori Modules)

Poora system 15 modules mein bata hai, har ek mein 6 actions (View/Create/Edit/Delete/Export/Print). Neeche sabse zyada use hone wale modules ka comparison hai.

MODULE	VIEW	CREATE	EDIT	DELETE	EXPORT	PRINT
ADMIN						
Sales	✓	✓	✓	✓	✓	✓

MODULE	VIEW	CREATE	EDIT	DELETE	EXPORT	PRINT
Purchase	✓	✓	✓	✓	✓	✓
Inventory	✓	✓	✓	✓	✓	✓
Users / Settings	✓	✓	✓	✓	✓	✓
CASHIER						
Sales	✓	✓	–	–	–	✓
Products	✓	–	–	–	–	–
Customers	✓	✓	–	–	–	–
Payments	✓	✓	–	–	–	–
Reports	✓	–	–	–	–	–
Purchase / Inventory / Users	–	–	–	–	–	–

07 Testing Ke Liye Login Details

Demo/seed data ke saath ye do accounts already bane hue hain:

● Admin

Emailadmin@business.local

PasswordAdmin@123

● Cashier

Emailcashier@business.local

PasswordCashier@123
